2020' BEST WEEK – ALERTS GENERATED BY NMVS

Week 45 (02 – 08 November) marked reaching the agreed figure at European level on **alerts' percentage out of the total number of transactions – 0,05%.**

Exceptional emphasis has been placed on decreasing the number of alerts generated by the National Medicines Verification System (NMVS).

The combined work effort of the OSMR technical and operational team and of the stakeholders involved in this process has led to this significant decrease: **from the beginning of 2019 which portrayed an alert percentage of 0,47% out of total transactions, to November 2020 which showed a number of 4,573 alerts out of a total number of transactions: 8,623,381 – 0,05%.**

The majority of alerts are generated by scanner configuration issues, End-User software implementation, as well as EU Hub upload data integrity. As a consequence, constant communication with all involved parties is essential in the alerts minimizing process.

One example of the engagement and dedication showed for this endeavour is the Software Providers' virtual gathering which is starting to contour the shape of a true professionals' community.

EU HUB RELEASE 1.8 – DEPLOYMENT CONFIRMATION

At the beginning of December, EMVO has officially announced that **Release 1.8 has been successfully deployed to PROD** (production environment) on Sunday, December 6th.

OSMR would like to express its gratitude and appreciation to all its partners and to thank everyone for the consistent hard work and effort that were shown during this very challenging year!

Wishing you a Happy Holidays Season from the team at OSMR!
