NATIONAL MEDICINES VERIFICATION SYSTEM - NMVS

A new version of the NMVS – Core 1.10 – is planned for deployment by mid-June 2022 in all the countries using Arvato Systems as the blue-print provider of the medicines verification system.

For Romania, the exact date of the system's new version roll-out is June 7th, 2022.

This *system's new version deployment has been coordinated by OSMR*, the Romanian Medicines Serialisation Organisation, more precisely by *Mr. Livius Carp, nominated as Release Captain for NMVS Core 1.10.*

As it has previously been done, in order for the roll-out of the system's new versions to be successful, joint User Acceptance Tests and Inter-Operability Testing have been performed, ensuring thus that all the functionality upgrades entailed by this new release are operational.

Among the elements of interest brought by this new release we mention: *the introduction of a parameter for double decommissioning, the filling in with new fields of web services used by software providers and the addition of a visual indicator in the NMVS Graphical User Interface (GUI).*

These new elements aim to improve the experience of the End-Users with the National Medicines Verification System (NMVS), as well as to reduce the number of alerts generated by the system.

The double decommissioning parameter refers to the introduction of a 10-day interval in which an End-User can repeat the same decommissioning action twice without generating an alert in the NMVS. The third attempt will generate a level 5 alert in the NMVS.

The visual indicator added to the NMVS Graphical User Interface (GUI) offers the End-Users the ability to check if they can operate again on the decommissioning transaction without generating an alert.

EMVO

EMVO has officially announced the deployment dates for the **1.11 Release of the EU Hub**. The deployment in the ITE and IQE environment has already been successfully confirmed. Thus, **Release 1.11 was successfully deployed to the ITE Environment on April 26th, 2022, and to the IQE Environment on April 28th, 2022.**

According to the planning of the deployment dates, which can be found in this Letter of Announcement: [LoA](#), the deployment of Release 1.11 of the EU Hub in PRD is planned for June 2022.

EMVO also released the second episode of the **EMVO Webcast series**, which focuses on providing useful information on a number of topics related to the European Medicines Verification System (EMVS).

This second episode tackles the quality of the OBP data uploaded to the EU Hub and it can be found on EMVO's website (Knowledge Database -> Videos).
