## MAHs INVOICING PROCESS FOR 2024

OSMR is preparing for yet another *invoicing cycle: starting mid-September and ending mid-December 2023.*

Thus, for the amounts pertaining to 2024, as for the previous years, an OSMR General Assembly was held on the 5<sup>th</sup> of July.

As a result of the meeting, *the affiliation fee has been decreased to 5,000 EUR (from 9,000 EUR) and the operational fee for the National Medicines Verification System (NMVS) has been set for 9,000 EUR/MAH.*

Therefore, the descending trend which started last year is continuing also this year and this is mainly due to the positive dynamics of the affiliated members.

However, because the budget is directly dependent on the MAHs interest to continue marketing on the Romanian market, the amount of both the affiliation and the operational fee can differ from one year to another.

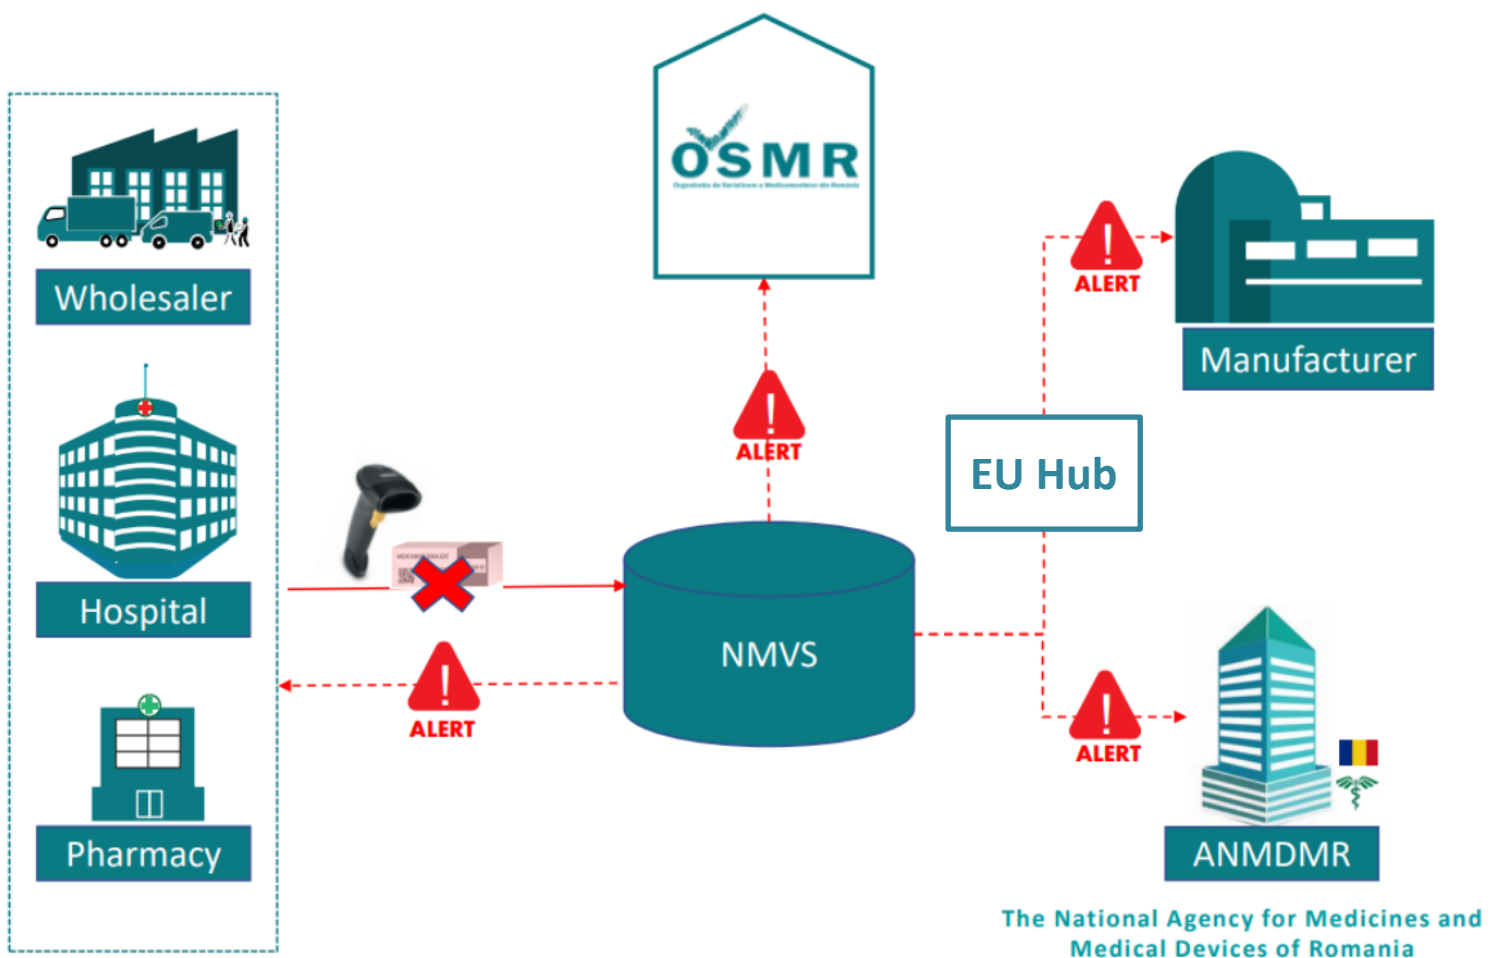

Furthermore, *OSMR would like to express its gratitude to the MAHs and OBPs who understood the importance of this verification system and have been engaged in a collaborative and fruitful relationship and who every year are contributing to patient safety.*

## ALERTS' GUIDE

The OSMR Technical Team has prepared an *Alerts' Guide* which can be found on the website, on the [NMVS Alerts](#) section.

This guide comprises extended information on the alerts' flow and the types of alerts generated by the NMVS alongside their possible causes.

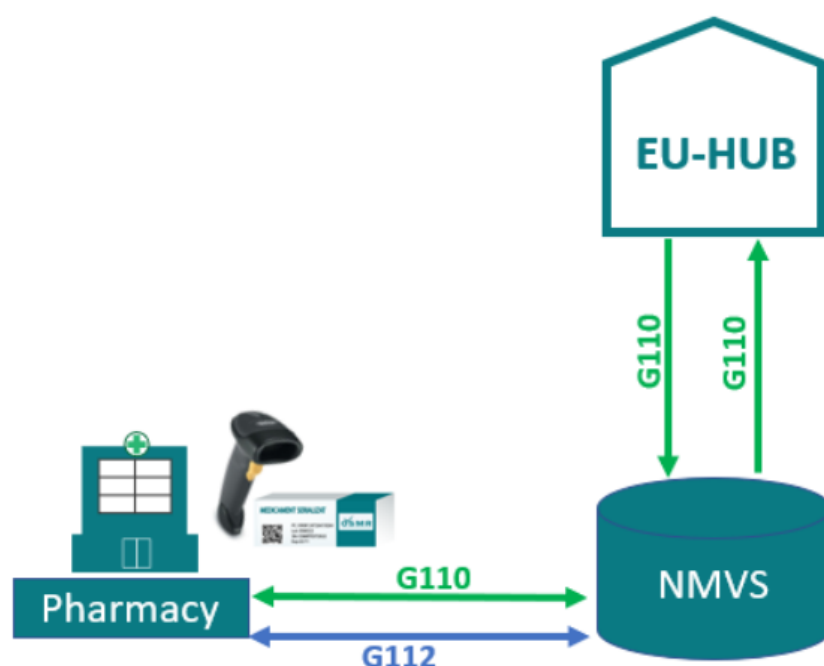

# GUIDE FOR PHARMACIES WITH THE EXISTING TRANSACTIONS WITHIN THE NMVS

A second Guide has been released this year, targeting Pharmacies, consisting of existing transactions within the NMVS.

The Guide can be found on the OSMR website, on the [Pharmacies](#) section.

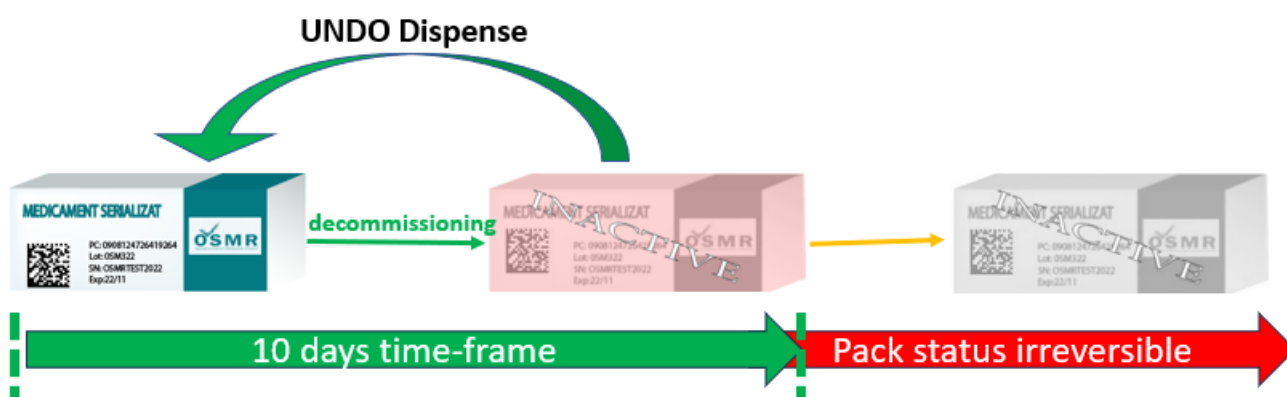

## VERIFICATION PROCESS (G110, G112)

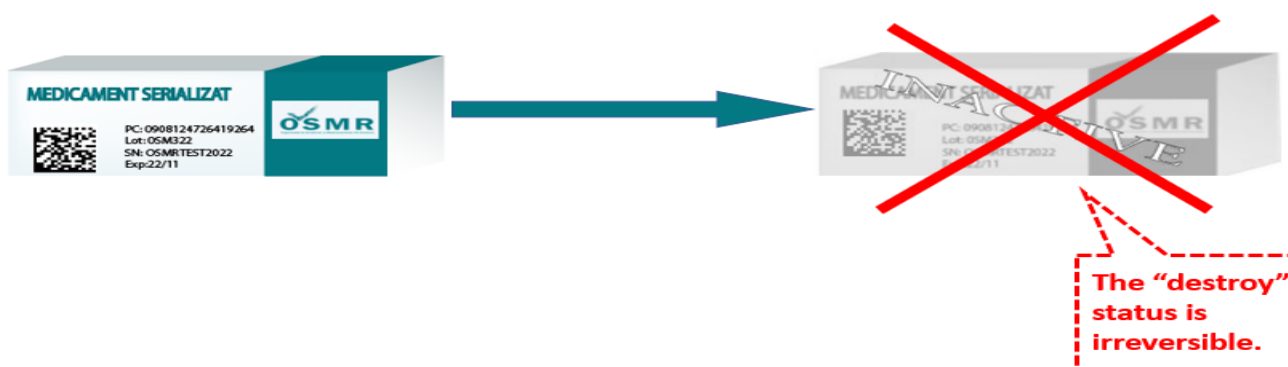

## DECOMMISSIONING (G120, G122)

## UNDO DECOMMISSIONING (G121, G123)

## PACK DESTROYED (G130, G132)

## NMVS Core 3.0

The new version of the National Medicines Verification System (NMVS) – **Core 3.0 is already in the testing phase and it will be installed in the Production (PROD) environment during this fall.**

Among the new elements brought by this updated version, we mention:

- Improving the system's overall security;
- Adding new information for the packs originating from Great Britain (following Brexit), for a more accurate identification and for eliminating the possibility of false alerts;
- Adding new Reports for the Authorities.
